   Mr. Cole Blackwell, Director of Operations, gave the following update on the 1190 Building: Plans are moving forward for use of this building. Staff coordinated an environmental assessment by an engineer within the last month. The findings were as follows:
   - The gutters were clogged, causing water to seep between the CMU and brick on the exterior walls. Additional downspouts need to be added and weep holes in the brick are needed to correct the problem.
   - No significant mold was found.
   - A French drain is needed along the north side of the building.
   Staff will proceed with having these improvements made so that the building can accommodate staff by the end of the year.

The Maintenance Division has completed installation of the plate settler covers, previously approved by the Board for sole-source procurement from MRI Systems, at the Wyckoff Plant. These covers will improve the efficiency of the sedimentation process by minimizing the growth of algae on the plates.
